

TTC

The City of Toronto in collaboration with local BIA associations wants to make an application where users can find the TTC vehicle they are waiting for, and see how much time they have. The application should suggest what is possible in the amount of time they have for the next stop. (Hint: you will need to make multiple ajax requests to get this data)

Scope of Work:

- Allow user to input their closest intersection, or use geolocation
- Allow users to see how much time they have until their vehicle arrives and offer suggestions of what to do. some ideas:
 - is there enough time to walk to the next station?
 - is there enough time to grab a coffee from a nearby coffee shop?

Deadline:

- Wireframes by Tuesday
- Beta by Thursday
- Final by the following Monday.

Deliverables:

- Project up on github
- Project on URL, can be ghpages url.
